2. ABSTRACT

The DoW specified for the Communication, Dissemination & Exploitation Workpackage: "An internal EoT website will be created and it will be managed by the Project Office with input by all Work-Package Leaders, TCC and Valorisation Committees. It will contain the Work Programme, approved by the Executive and TCC Committees, various working documents and interim reports, and any useful information for the participants such as details for the Meetings of the Management and Technical Committees, information for workshops and seminars, etc. An electronic communication network will be set-up in order to facilitate the exchange of information between the participants of EoT."
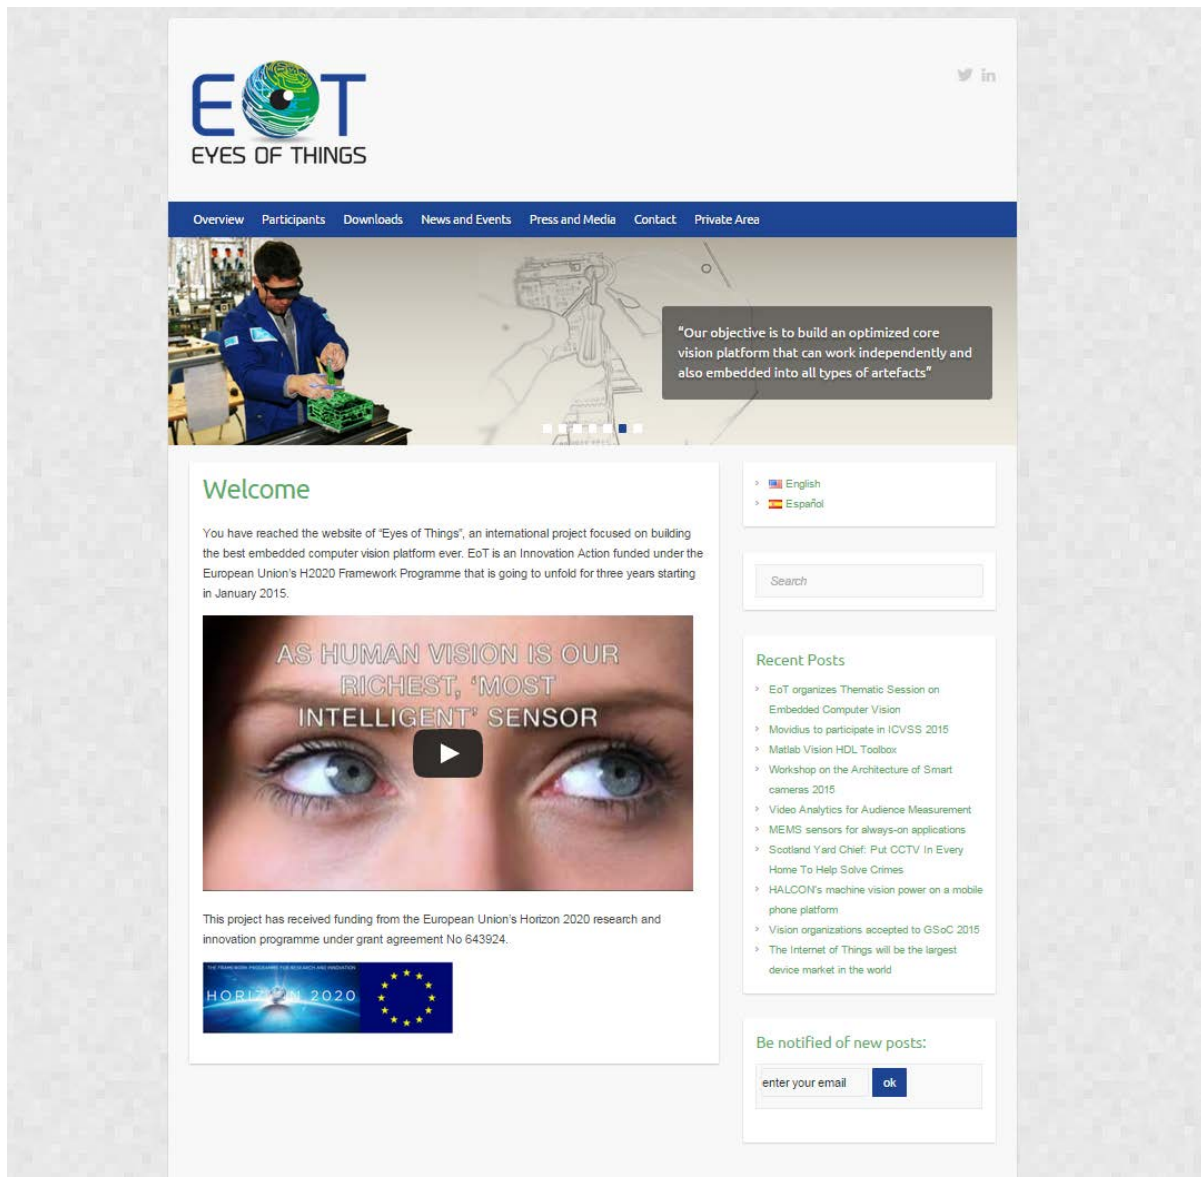

This brief report describes the aforementioned deliverable.
EoT website and communication platform

3. WEBSITE AND COMMUNICATION PLATFORM

The project website:

<center>http://eyesofthings.eu</center>

is active since December 11th, 2014. The following picture shows, at the time of writing, the front page:

This website is based on Wordpress. Consortium members have easy write access to some parts of the website.

For file sharing and collaborative work, a private area in the website was first used but soon proved insufficient so a subscription was purchased to the well-known collaborative SaaS projectplace, see the following pictures:

This platform is private to the Consortium and it include features such as: conversations, work plan, tasks (Kanban boards, pictured above), shared files and folders (incl. version control), online meetings and people/users (incl. email lists).
